Q Series

A comprehensive range of LED indicators with unlimited design possibilities

The Q series is a range of panel mount LED indicators available in a **very large choice of colors, bezel styles and voltages.**

1 Q Series video

The APEM range of LED indicators is one of the broadest on the market and has a **modern and attractive design.**

Q series indicators are developed and manufactured to meet high standards of **durability, performance and environmental properties.**

Steve Blackwell, product manager for LED indicators, introduces the Q series in the below video:

② Stainless steel 316L Q22

APEM teams are constantly striving to offer LED indicators meeting market and customer needs. We must adapt to new opportunities and offer new products complementary to our existing lines, always aiming at clear product definition and great creativity.

The Q22 series is available with numerous options: anodized finish, stainless steel and secret-until-lit markings.

3 Anodized QRM8 and Q10 models

Q10 and QRM8 indicators are now available with an anodized finish. Anodization ensures better **resistance to wear, corrosion and heat.**

It also provides an attractive and modern appearance with different colors offered: red, green, yellow, blue, black, olive green and grey to **perfectly match your design.**

Other colors are available on request.
