Diverse Electronics named Canadian Distributor of Stannol Products

Montreal, Quebec – Diverse Electronics is very pleased to add **Stannol GmbH** of Germany to its product line-up of consumable solder materials. **Stannol** is a manufacturer of solder bar, paste, wire and flux. In addition to its wide offering of solder materials, Stannol is patented to produce SN100C, a Nihon Superior licensed product used in soldering machines all over the world.

“We are very happy to add Stannol to our consumables division,” said Rick Masciotra, President of Diverse Electronics. “Stannol’s quality products are a good fit with the rest of our product line-up. We are always seeking to provide our customers with the best solutions for their manufacturing needs, and Stannol definitely fits that mandate.” Diverse, now with the Stannol partnership, will be able to further improve overall product offerings, on-time delivery and cost-effectiveness in all soldering products and consumables.

Stannol’s SN100C product is known for providing a superior purity of tin in their solder, resulting in less dross. And because the product does not contain silver, it is cost-efficient. Stannol also brings to the table technical support from its experienced application engineers, as well as in-process solder bath analyses at no charge.

Founded in 1879, Stannol GmbH is a full-range producer of solder, solder wire, paste, flux, soldering irons, and electronically-controlled soldering stations. Recognized worldwide, the company is known for its high-quality products and dedication to tradition and innovation.
