Diverse Electronics Launches Industrial Vending Program

St-Laurent, Quebec – Diverse Electronics is pleased to introduce its Industrial Vending Program in the company’s offering of comprehensive inventory management solutions. The industrial vending program offers a wide variety of solutions completely customizable to the needs of each production floor, machine shop or manufacturing environment.

“We are always very pleased to be able to find solutions that will save our customer money and increase efficiency,” said Rick Masciotra, President. “We have a solution for every customer, no matter the industry or application, whether the requirements are components, plant tools, consumables or a combination of each.”

Whether it is a vending bay, a drawer system, or a locker, companies can lease or purchase the solution that best suits their needs. Customers benefit from the cost reductions associated with the machine’s reporting and control features, there is no more added expenditure of buying excess stock, and employee productivity is increased with products being available 24/7, eliminating down time.

Diverse Electronics’ Industrial Vending Program is appropriate across all industries, and most effective in single or multi-shift manufacturing operations, calibration labs, machine shops, paint shops, maintenance departments, offices, and employee entrances.
