This is your guide***

The purpose of this guide is to additional information to assist you with 3M™ Particulate Filters and 3M™ Gas & Vapor Cartridges that you use with your 3M™ Half Facepiece or Full Facepiece Reusable Respirators.

^{***}This booklet is designed to be a guide only. For additional information to assist you with 3M Respiratory Products (e.g., choosing a 3M Respirator, Fit Testing, and when to change your 3M" Particulate Filters and 3M" Gas & Vapor Cartridges) call 3M Technical Service Helpline at 1-800-243-4630 or talk to your 3M PSD Sales Representative.

Whattypes of 3M[™] Filters & Cartridges are there?

3M™ Particulate Filters:

Filters only aerosols (e.g., dust, mists, fumes, smoke, mold, bacteria, etc). Some filters also have nuisance-level gas and vapor capabilities.

3M[™] Gas & Vapor Cartridges:

Filters only gases and vapors. There are different kinds of cartridges for different kinds of gases and vapors.

3M™ Combination Cartridge/Filters:

Filters particles, gases and vapors. Different combination particulate/cartridge filters are used depending on the gas or vapor present in the air.

How do 3M™ Particulate Filters work?

3M™ Particulate Filters

Filters capture particles through the mechanisms of impaction, interception and diffusion. Additionally, these filters are enhanced with electrostatically charged fibers to help trap particulates within the filter media.

As particulate filters load up with the contaminant, they typically become more efficient; however, they also become harder to breathe through.

NIOSH has nine classifications for particulate filters based on minimum filtration efficiency and the type of aerosol (non-oil or contains oil). The chartbelow shows the nine classifications.

Filter classifications, efficiencies, oil resistances and challenge agents specified under 42 CFR part 84

| 42 CFR pail 64 | Oil Resistance Categories | | | Oil Resistance Categories | |
|-----------------------|---------------------------|--------------------------------|---------------------------------|---------------------------|--|
| Minimum Efficiency | N Non-oil Aerosols | R Includes oil Aerosols* | P Includes oil Aerosols** | | |
| 95% | N95 | R95 | P95 | | |
| 99% | N99 | R99 | P99 | | |
| 99.97% | N100 | R100 | P100 | | |

 $^{^*}$ May have a time use restriction on this filter series when oil aerosols are present.

Why do I need to replace my 3M™ Filters regularly?

As particles are collected on the filter media, the respirator will eventually become more difficult to breathe through comfortably.

^{**}Use according to manufacture's time use restrictions when oil aerosols are present.

When do I replace my 3M™ Particulate Filters?

3M™ HalfFacepiece Reusable Respirator 6000 Series 6100, 6200, 6300

Replace 3M™ Particulate Filters when:

- It becomes difficult to breathe comfortably (this will vary from individual to individual).
- The filter becomes dirty or physical damage occurs.
- For P series filters only when used in environments containing oil aerosols:
 - Dispose of P-Series filters after 40 hours of use or 30 days, whichever is first.

For guidance on filter replacement frequency, visit 3M.com/filterchange.

How do 3M™ Gas & Vapor Cartridges work?

3M™ Gas & Vapor Cartridges

These cartridges utilize sorbent material to filter the gas or vapor molecules. Typically the sorbent is activated carbon. Different chemical treatments may also be added to the surface of the activated carbon to adsorb different types of gases or vapors. When the cartridges reach their capacity, the gases or vapors start to come through the cartridge to the user. This is called "breakthrough."

NIOSH uses a classification system to identify the different types of contaminants these treated carbon grains will capture.

| Color Coding for 3M™ Chemical Cartridges | | | |
|---|----------------------------|-------------|--|
| 6001 | Organic Vapor | Black | |
| 6002 | Acid Gases | White | |
| 6003 | Organic Vapor/Acid Gases | Yellow | |
| 6004 | Ammonia/Methylamine | Green | |
| 6005 | Formaldehyde/Organic Vapor | Olive/Black | |
| 6006 | Multi-Gas/Vapor | Olive | |
| 6009 | Mercury Vapor/Chlorine Gas | Orange | |

The service life (i.e., how long it will last) of any gas and vapor cartridge is affected by many factors such as the: contaminant, contaminant concentration, breathing rate, humidity level, temperature and other use conditions.

Replace 3M[™] Gas & Vapor Cartridges:

- In accordance with your established change schedule or government regulation.
- Or sooner if the contaminant can be detected inside the respirator by smell ortaste.

To avoid using your 3M™ Gas & Vapor Cartridges beyond their service life, take the following steps:

- Before use, check the expiration date printed on the package of your 3M™ Gas & Vapor Cartridges.
- Write the date on the cartridges when first removed from the pack.
- Change in accordance with your established cartridge change schedule or government regulation.
- If at any time you smell or taste the contaminant or irritation is detected, leave the contaminated area immediately and try adjusting your respirator and/or change the respirator cartridges.

To help establish how frequently cartridges should be replaced, visit 3M.com/ServiceLifeSoftware to access 3M™ Service Life Software.

For specific advice on when to change 3M™ Particulate Filters and 3M™ Gas & Vapor Cartridges call the 3M Technical Service Helpline 1-800-243-4630.

Frequently Asked Questions

What is the shelf life of 3M™ Cartridge

Provided they are stored unopened in 3M** Ultimate EX Full Faceniess the original packaging and away from direct sunlight, humidity and sources of high temperature. cartridges will last five years from manufacture date. See "use by" date on packaging.

Reusable Respirator FF-400 Series FF-401 FF-402 FF-403

How should I store my 3M™ Respirator Cartridges and Filters?

Prior to first use and when not in use, your 3M[™] Respirator. Cartridges and Filters should be kept clean, cool and dry, away from contaminated atmospheres to avoid deterioration. Store cartridge in a sealed container or bag.

Why do I need to use a 3M™ Particulate Filter with my 3M[™] Gas & Vapor Cartridges for some applications?

The particulate filter helps remove tiny droplets or particles in the air (e.g., mists from spray painting). The gas and vapor cartridges do not help filter these particles.

What is a Fit Test?

Because everyone's face is different, a fit test is used to determine if there is an adequate seal between the edge of a respirator and the face of the wearer. OSHA requires this to be done before the respirator is first issued and then at least annually.

Can I wear a tight-fitting respirator with a beard?

No. OSHA requires respirator wearers be clean-shaven. Do not use a tight-fitting respirator with beards or other facial hair or other conditions that prevent a good seal between the face and the faceseal of the respirator.

Why are the filters and cartridges "pink"?

When a filter or cartridge has the magenta color code it has the P100 designation. This color provides uniformity and easy identification.

Respirator and Filter/Cartridge Matrix

Possible combinations for facepieces, cartridges, filters, retainers and adapters.

3M™ Particulate Filters

3M Particulate Filters 2000, 2200 and 7093 Series can be attached to all 3M™ Respirators with bayonet connections.

The 2000, 2200 and 7093 Series filters can also be attached to 3M[™] 6000 Series Cartridges using the 3M[™] 502 Filter Adapter.

The 3M[™] 5N11 and 5P71 Filters can be attached to the 3M[™] Half Facepiece Disposable 5000 Series Respirator or 6000 Series Cartridges using the 3M[™] 501 Filter Retainer. They can also be attached to 3M[™] Respirators with bayonet connections using the 603 adapter.

Note: All 3M[™] Respirator, cartridge, filter combinations must be in accordance with NIOSH approvals.

3M's bayonet-style cartridge connection for easy to fit filters and cartridges.

3M™ Particulate Filters

| Product Code | Description |
|--------------|---|
| 2071 | NIOSH approved for environments containing certain oil and non-oil based particles. |
| 2076HF | NIOSH approved for hydrogen fluoride and certain oil and non-oil based particles. 3M recommended for relief against nuisance levels* of acid gases. |
| 2078 | NIOSH approved for environments containing certain oil and non-oil based particles. 3M recommended for relief against nuisance levels* of organic vapor/acid gases and for ozone protection up to 10 times OSHA PEL. Not NIOSH certified for use against ozone. |
| 2091 | NIOSH approved for environments containing certain oil and non-oil based particles. |
| 2096 | NIOSH approved for environments containing certain oil and non-oil based particles. 3M recommended for relief against nuisance levels* of acid gases. |
| 2097 | NIOSH approved for environments containing certain oil and non-oil based particles. 3M recommended for relief against nuisance levels* of organic vapors and ozone protection up to 10 times OSHA PEL. Not NIOSH certified for use against ozone. |
| 2291 | NIOSH approved for environments containing certain oil and non-oil based particles. |
| 2296 | NIOSH approved for environments containing certain oil and non-oil based particles. 3M recommended for relief against nuisance level acid gas. |

AWARNING

These respirators help reduce exposures to certain airborne contaminants. Before use, the wearer must read and understand the *User Instructions* provided as a part of the product packaging. A written respiratory protection program must be implemented meeting all the requirements of OSHA1910.134 including training, fit testing and medical evaluation. In Canada, CSA standards Z94.4 requirements must be met and/or requirements of the applicable jurisdiction, as appropriate. Misuse may result in sickness or death. For proper use, see package instructions, supervisor, or call 3M PSD Technical Service in USA at 1-800-243-4630 and in Canada at 1-800-267-4414.
